SKILLS SUMMARY

Languages: C/C++ OOPS, Java, Python, TypeScript, Go, SQL, NoSQL, Bash

Frameworks: TensorFlow, React.js, Node.js, Spring Boot, Elasticsearch, Flask, Apache Spark, Kafka

Tools: Git, Docker, Kubernetes, AWS, Azure, PostgreSQL, MongoDB, Neo4J, Jenkins, Redis

Libraries: NLTK, NumPy, PyTorch, Pandas, Keras, BERT, FastAPI, Django

Domains: Big Data, NLP, Data Analytics, Machine Learning, Distributed Systems, large-scale ETL

Software Engineering Practices: Agile, Scrum, Object oriented analysis and design, CI/CD, Unit Testing, Microservices

EDUCATION

PES University

Bangalore, India

Bachelor of Technology in Computer Science Engineering

Dec. 2021 – Jun. 2025

Specialization in Machine Intelligence and Data Science

CGPA: 9.70/10

Recipient of Prof. MRD Scholarship for ranking among the top 2% in the department.

EXPERIENCE

Morgan Stanley

Bangalore, India

Technology Analyst Intern

May 2024 – Jul. 2024

- Developed a large-scale ETL pipeline using Talend Java to process data from four vendors, improving data quality by 40% and eliminating anomalies. Leveraged Kafka to efficiently transfer data to multiple downstream tasks.
- Optimised a NLP model used for attribute correlation between different data vendors to find useful data among them.

Mitsubishi UFJ Financial Group, Inc.

Bangalore, India

Software Engineer Intern

Dec. 2023 – Feb. 2024

- Engineered a full-stack ticketing application to replace the legacy system, reducing ticket resolution time by 60%.
- Designed a user-friendly interface and deployed the application in production using Microsoft Azure in Singapore.

Center for Cloud Computing and Big Data, PES University

Bangalore, India

Research Intern

May. 2023 – Aug. 2023

- Built a hybrid speech recognition system for robots using HMMs and deep learning, boosting accuracy and speed.
- Optimized legacy code by 20% and achieved up to 26.59x faster speeds on Jetson Xavier NX deployment. ([Paper](#))

PROJECTS

IEEE RAS PESU Official website | *Next.js, Node.js, Tailwind CSS, CMS, APIs* ([link](#))

Aug. 2023

- Created an enterprise-grade website interfaced with a real-time headless CMS for flexible content management.
- Led a team of five to enhance web page loading time by 40% and boost responsiveness, resulting in a 70% increase in visitors. Deployed and integrated a CI/CD pipeline, driving monthly visits to over 1,000.

MicroRWKV | *Python, PyTorch, TensorFlow* ([link](#))

Apr. 2024

- Crafted a CUDA kernel-free architecture for RWKV, compatible with all GPU/CPU setups. Unlike Transformers, RWKV shows linear latency based on context length and consistent memory usage. Outperformed GPT-2 by 8%.

DataVault - Cloud-based storage | *Vue.js, Flask, Web3, IPFS* ([link](#))

Mar. 2023

- Implemented data decentralization and distribution across multiple nodes using Web3.storage and IPFS. Provides a 100% tamper-proof storage solution using AES/SHA encryption algorithm.

YAKt - Yet Another Kraft | *Apache Kafka, Python, HTTP* ([link](#))

Dec. 2023

- Designed an event-based, distributed metadata management system as a Zookeeper replacement in the Kafka ecosystem. Engineered for robust Kafka leader election and fault tolerance, featuring an HTTP server with 12 endpoints facilitating broker-node communication.

KrishiSahayak - AgriTech Project | *Flask, OpenCV, TensorFlow, Numpy* ([link](#))

Apr. 2023

- Fabricated a full-stack web application utilizing Image Processing to detect crop pests and diseases with a robust model trained on 82,000 images, achieving 91% accuracy. Integrated an E-Commerce segment for purchasing pesticides.

InventoSync - Inventory Management System | *RabbitMQ, Docker, Mongo DB* ([link](#))

Mar. 2024

- Developed a microservices-based system to manage inventory, track stock levels, and process orders. Utilized RabbitMQ for inter-service communication and Docker for scalable, modular, and deployable containerization.
